

Cyber security:

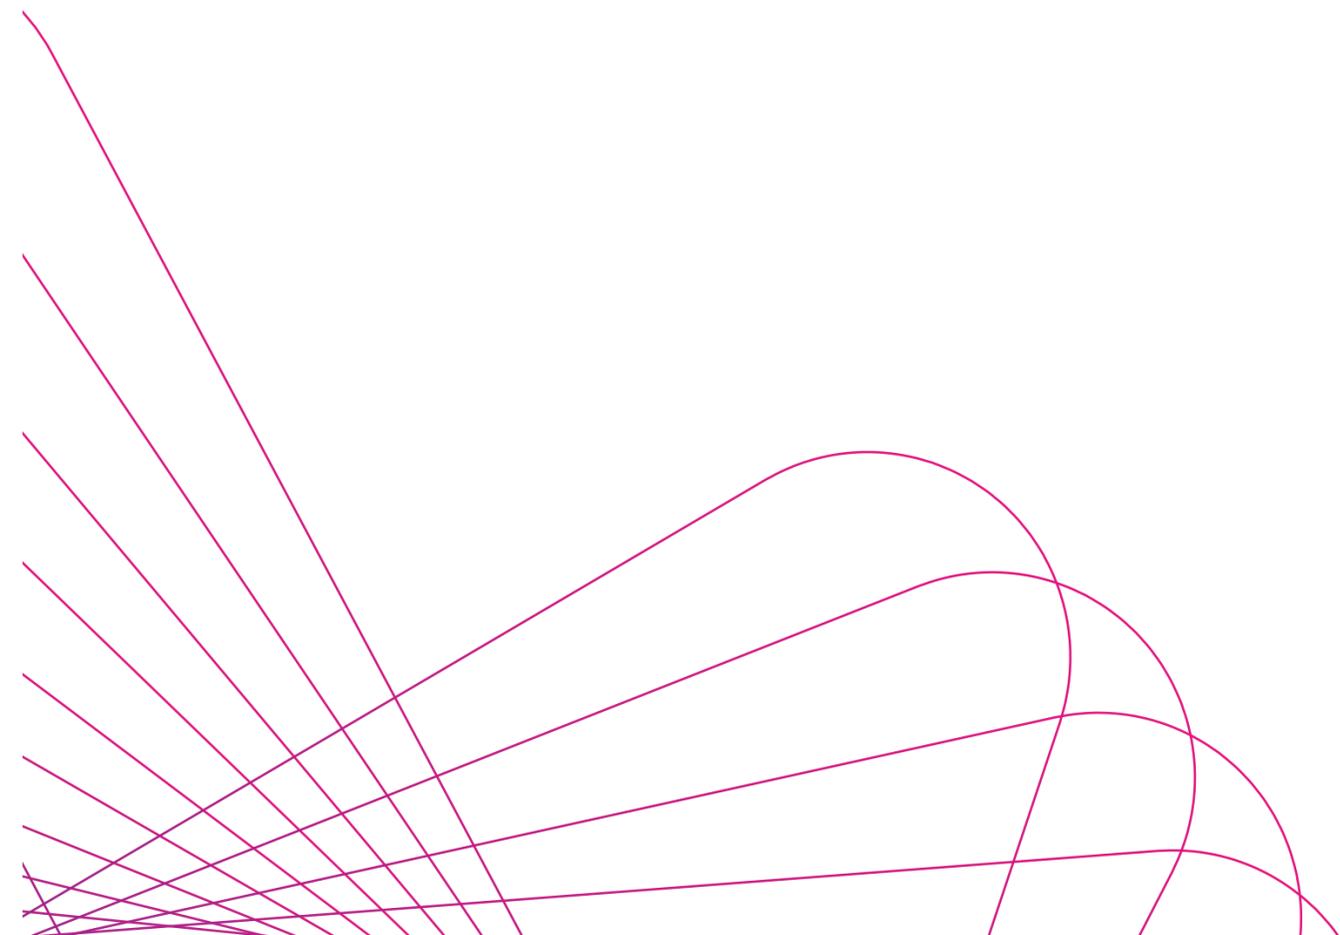

FACT

or

FICTION

1.

**Cyber security is just
an issue for IT.**

FICTION

Human error is the number one cause of cyber-attacks and threats entering your network. Due diligence and education is necessary for all users across an organisation.

2.

Holding something of value, such as data, makes you a potential target.

The word "FACT" is written in a bold, white, sans-serif font. It is enclosed within a white rounded rectangular border. The background is a solid teal color.

FACT

If you hold data you're at risk of being hacked, no matter how big or small the organisation you work for is.

3.

A holistic approach to your security strategy reduces risk of gaps and cyber holes.

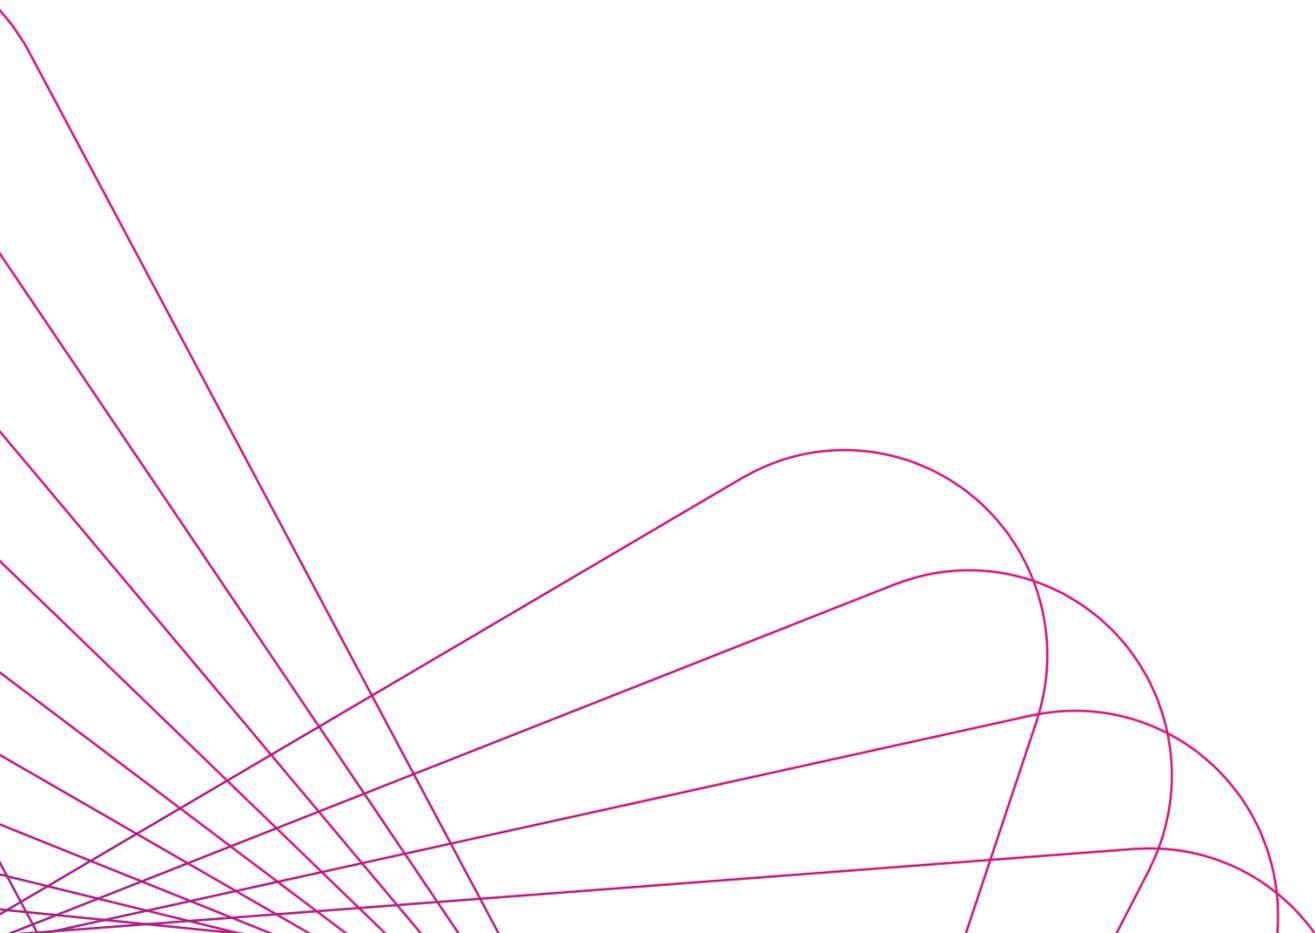

FACT

Quality over quantity. Having a wide range of tools to manage your cyber security is not only cumbersome, but is actually harder to track what each individual tool covers, and therefore indentify where your gaps are.

4.

**We've been hacked before
and resolved the issue so
now we are secure.**

FICTION

Being hit once does not mean you won't be hit again! As the threat landscape evolves, so should your security.

5.

Our people are trained once a year to recognise threats, they know what they are doing.

FICTION

Cyber threats are developed at a rapid pace.

Running workshops, and keeping your team consistently updated with new and emerging threats means they have a better chance at protecting themselves and your organisation.
