

IntelliSite Heuristic Based Monitoring (hBM)

Advanced Solution

The complete temperature
detection solution.

CORE BENEFITS FOR SPORTS STADIUMS AND ARENAS

Sports stadiums and arenas bring together thousands of fans for games or events, so it's critical that everything runs seamlessly in order to provide a safe and enjoyable experience for attendees. With multiple points of entry at nearly every stadium and arena, vigilance is needed at every door – without taxing event staffing or budgets. IntelliSite's hBM Solution can help.

AI Enabled Accuracy

Not all thermal solutions are created equal. IntelliSite's hBM Advanced Solutions is more than an FDA approved Thermal Camera, our proprietary AI Edge Software increases accuracy, within +/-0.1C, and significantly reduces false alarms. Plus, easy visual calibration ensures your system stays accurate.

Central Management

Multiple entryways at arenas or stadiums can be centrally managed with IntelliSite's Cloud-based system. All cameras and alerts flow together in our DeepLogic software – you access your data through our DeepInsights Dashboard, provided with alerts, notifications and analytics. Simple and intuitive, our interface helps you recognize when action needs to be taken in real time with both sound and visual cues.

Avoid Congestion

Bottlenecks cause more than an inconvenience; they are a health hazard, threatening to sabotage your best efforts to adhere to social distancing guidelines. The hBM Advanced Solution can screen up to 100 people per minute, enabling you to monitor potentially sick attendees more rapidly and engage in secondary screening protocols.*

Grand Slam Service + Support

From design and installation through management and technical support – IntelliSite is here for you. We recognize no two stadiums or arenas are alike. Our IntelliWize design and installation team will create a solution that suits your needs and will make sure you are up and running quickly. Our IntelliCare 24/7 management and tech support can do anything from monitor the health of your system to manage alerts for you.

Advanced Solution Grows With You

More than thermal screening, our solution has additional software modules to help you solve other challenges, like occupancy management, PPE compliance and demographic statics gathering.

Privacy Enabled

We take privacy concerns seriously. The hBM Advanced Solution comes with a Privacy Enabled feature which blurs the faces of each individual as they appear on camera. In addition, videos are not housed externally but at the Edge, within the component's RSU. All of IntelliSite's visual AI solutions follow GDPR regulations.

* Thermal measurements are designed as a triage tool and should not be the sole means of diagnosing high risk individuals for any viral threat. Elevated thermal readings should be confirmed with a secondary, clinical grade evaluation tool. FDA recommends screening individuals one at a time, not in groups.
